

# Develop **better** battery materials with **Wildcat**

Wildcat uses proprietary high throughput technology to **accelerate battery materials R&D** for others. Wildcat's customers **reduce costs** and commercialize battery products **faster**. Wildcat is ready to help your company get its new battery technology to market...**F A S T!**

## Wildcat's Business Model

Wildcat accelerates **battery R&D** as a service. Our scientists work with **global leaders** throughout the battery industry in the auto, electronics, medical and military industries. Projects targeting new materials for cathodes, anodes, electrolytes, and electrode formulations are all possible. A few ways we collaborate include:

- Accelerated development of your company's materials
- Joint development collaborations on all-new materials
- Further development of Wildcat's background materials
- Licensing of Wildcat's patented battery materials IP

## Wildcat Helps Companies Throughout the Supply Chain

Wildcat's customers exist throughout the battery supply chain and include material suppliers, cell makers and OEM's of all kinds. Any company in need of **rapid battery materials development** is a great partner for Wildcat and its unique high throughput approach!

Electronics

Auto

Medical

Tools

Military

E-Bike

Grid

## Wildcat Project Possibilities

### Cathode

Layered oxides  
Spinel  
Phosphates  
Disordered  
Primary battery  
Others...

### Anode

Carbon  
LTO  
Si alloy  
Composites  
Silicon

### Electrolyte

High voltage  
High temperature  
Low temperature  
Gas reduction  
Aqueous  
Solid state

### Beyond Lithium-ion

Conversion materials  
Na-ion  
Mg-ion  
Li sulfur  
Flow batteries  
Metal air
